

Standard Specification for Welded Nickel and Nickel-Cobalt Alloy Pipe¹

This standard is issued under the fixed designation B619/B619M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope*

- 1.1 This specification² covers welded pipe of nickel and nickel-cobalt alloys (UNS N10001; UNS N10242; UNS N10665; UNS N12160; UNS N10624; UNS N10629; UNS N10675; UNS N10276; UNS N06455; UNS N06007; UNS N06975; UNS N08320; UNS N06002; UNS N06022; UNS N06035; UNS N06044; UNS N06058; UNS N06059; UNS N06200; UNS N10362; UNS N06985; UNS N06030; UNS R30556; UNS N08031; UNS N08034; UNS N06230; UNS N06686; UNS N06210; and UNS R20033)³ as shown in Table 1.
- 1.2 This specification covers pipe in Schedules 5S, 10S, 40S, and 80S through 8-in. nominal pipe size and larger as set forth in ANSI B36.19 (see Table 2).
 - 1.3 Two classes of pipe are covered as follows:
- 1.3.1 *Class I*—As welded and solution annealed or welded and sized and solution annealed.
- 1.3.2 Class II—Welded, cold worked, and solution annealed.
- 1.4 All pipe shall be furnished in the solution annealed and descaled condition. When atmosphere control is used, descaling is not necessary.
- 1.5 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.
- 1.6 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to become familiar with all hazards including those identified in the appropriate

1.7 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

2. Referenced Documents

2.3 ASME Boiler and Pressure Vessel Code⁶
Section IX Welding and Brazing Qualifications

3. Terminology

3.1 For definitions of terms used in this standard refer to Terminology B899.

4. General Requirement

4.1 Material furnished under this specification shall conform to the applicable requirements of Specification B775 unless otherwise provided herein.

Safety Data Sheet (SDS) for this product/material as provided by the manufacturer, to establish appropriate safety, health and environmental practices, and determine the applicability of regulatory limitations prior to use.

¹ This specification is under the jurisdiction of ASTM Committee B02 on Nonferrous Metals and Alloys and is the direct responsibility of Subcommittee B02.07 on Refined Nickel and Cobalt and Their Alloys.

Current edition approved July 1, 2017. Published August 2017. Originally approved in 1981. Last previous edition approved in 2017 as B619/B619M-17. DOI: $10.1520/B0619_B0619M-17$ a.

² For ASME Boiler and Pressure Vessel Code applications see related Specification SB-619 in Section II of that Code.

³ New designation established in accordance with Practice E527 and SAE J1086, Practice for Numbering Metals and Alloys (UNS).

6	6.625	168.28	0.109	2.77	0.134	3.40	0.280	7.11				
8	8.625	219.18	0.109	2.77	0.148	3.76	0.322	8.18				

^A Schedules 5S and 10S wall thicknesses do not permit threading in accordance with ANSI B2.1-1960.

5. Ordering Information

- 5.1 It is the responsibility of the purchaser to specify all requirements that are necessary for material ordered under this specification. Examples of such requirements include, but are not limited to the following:
 - 5.1.1 *Alloy* (Table 1),
 - 5.1.2 *Class* (see 1.3),
 - 5.1.3 Quantity (feet or number of lengths),
- 5.1.4 *Size* (nominal size or outside diameter and schedule number or average wall thickness),
 - 5.1.5 Length—Specify cut length or random,
- 5.1.6 *Certification*—State if certification or a report of test results is required,
- 5.1.7 Purchaser Inspection—State which tests or inspections are to be witnessed.
- 5.1.8 *Ends*—Plain ends cut and deburred will be furnished, unless otherwise specified, and
- 5.1.9 Samples for Product (Check) Analysis—State whether samples shall be furnished.

6. Materials and Manufacture

- 6.1 The pipe shall be made from flat-rolled alloy by an automatic welding process with no addition of filler metal.
- 6.2 Subsequent to welding and prior to final heat treatment, Class II pipes shall be cold worked either in both weld and base metal or in weld metal only. The method of cold working may be specified by the purchaser.

7. Chemical Composition

- 7.1 The material shall conform to the composition limits specified in Table 1.
- 7.2 If a product (check) analysis is made by the purchaser, the material shall conform to the requirements specified in Table 1 subject to the permissible tolerances in Specification B775.

8. Mechanical Properties and Other Requirements

- 8.1 *Tension Test*—The tensile properties of the material at room temperature shall conform to those shown in Table 3.
 - 8.1.1 One tension test shall be made on each lot of pipe.
- 8.2 *Flattening Test*—One flattening test shall be made on a specimen from one end of one pipe from each lot.
 - 8.3 Transverse Guided Bend Test:
- 8.3.1 At the option of the pipe manufacturer, the transverse guided bend test may be substituted in lieu of the flattening test. Two bend specimens shall be taken transversely from pipe or the test specimens may be taken from a test plate of the same material and heat as pipe, which is attached to the end of the cylinder and welded as a prolongation of the pipe longitudinal seam. Except as provided in 8.3.2, one shall be subjected to a face guided bend and a second to a root guided bend test. One specimen shall be bent with the inside surface of the pipe against the plunger and the other with the outside surface of the pipe against the plunger. Guided bend test specimens shall be prepared and tested in accordance with Section IX, Part QW 160 of the ASME Boiler and Pressure Vessel Code and shall be one of the types shown in QW462.2 and QW462.3 of that code.
- 8.3.2 For specified wall thicknesses ³/₈ in. [9.5 mm] and over, but less than ³/₄ in. [19 mm] side bend tests may be made instead of the face and root bend tests. For specified wall thicknesses ³/₄ in. [19 mm] and over, both specimens shall be subjected to the side bend tests. Side bend specimens shall be bent so that one of the side surfaces becomes the convex surface of the bend specimen.
- 8.3.3 The bend test shall be acceptable if no cracks or other defects exceeding ½ in. [3 mm] in any direction be present in the weld metal or between the weld and the pipe or plate metal after bending. Cracks which originate along the edges of the specimen during testing, and are less than ¼ in. [6.5 mm] measured in any direction shall not be considered.

TABLE 3 Mechanical Properties of Pipe

6 [168.28]	+0.063	0.031	+1.60	-0.79						
8 [219 18]	+0.063	0.031	+1 60	-0.79						

^A The permissible variations in the above table apply to individual measurements, including out of roundness (ovality).

8.4 *Hydrostatic or Nondestructive Electric Test*—Each pipe shall be subjected to either the hydrostatic or the nondestructive electric test at the manufacturer's option.

9. Dimensions and Permissible Variations

- 9.1 Wall Thickness—Variations in wall thickness shall not exceed the specified nominal wall thickness by more than $\pm 12\frac{1}{2}$ %, except as follows:
- 9.1.1 If weld beads are present on the inner surface of the pipe, they shall not exceed the wall thickness of the pipe by more than 20 % or 0.050 in. [1.27 mm], whichever is less, of the specified nominal wall thickness for Class I pipe, and 5 % or 0.005 in. [0.127 mm], whichever is less, of the specified nominal wall thickness for Class II pipe.
- 9.1.2 Sunken welds in Class I pipe shall not be deeper than 15 % of the specified nominal wall thickness and never deeper than 0.030 in. [0.79 mm]. Class II pipe shall not have sunken welds.
- 9.2 *Outside Diameter*—The permissible variations in outside diameter shall not exceed the limits prescribed in Table 4, except as provided for in 9.1.2.
- 9.3 For pipe diameters greater than shown in Table 4, permissible variations in dimensions at any point in a length of pipe shall not exceed the following:
- 9.3.1 *Outside Diameter*—Based on circumferential measurement, $\pm 0.5 \%$ of the nominal outside diameter.
- 9.3.2 *Out-of-Roundness*—Differences between major and minor outside diameters, 1.0 % of the specified outside diameter.
- 9.3.2.1 For thin-wall pipe, defined as pipe having a wall thickness of 3 % or less of the outside diameter, the difference in the extreme outside readings (ovality) in any one cross section shall not exceed 1.5 % of the specified outside diameter
- 9.3.3 *Alignment (Camber)*—Using a 10 ft. [3 m] straightedge placed so that both ends are in contact with the pipe, the camber shall not be more than ½ in. [3.17 mm].

10. Keywords

10.1 UNS N06002; UNS N06007; UNS N06022; UNS N06030; UNS N06035; UNS N06044; UNS N06058; UNS N06059; UNS N06200; UNS N10362; UNS N06210; UNS N06230; UNS N06455; UNS N06975; UNS N06985; UNS N08031; UNS N08034; UNS N08320; UNS N10001; UNS N10242; UNS N10276; UNS N10624; UNS N10629; UNS N10665; UNS N10675; UNS R30556; welded pipe

 $^{^{\}it B}$ Solution annealed at a temperature between 2200 to 2275°F [1204 to 1246°C] followed by a water quench or rapidly cooled by other means.

APPENDIX

(Nonmandatory Information)

X1. HEAT TREATMENT

X1.1 Proper heat treatment during or subsequent to fabrication is necessary for optimum performance, and the manufacturer shall be consulted for details.

SUMMARY OF CHANGES

Committee B02 has identified the location of selected changes to this standard since the last issue (B619/B619M-17) that may impact the use of this standard. (Approved July 1, 2017.)

- (1) Added new alloy UNS N08034 to scope (Section 1).
- (4) Added UNS N08034 in Keywords in Section 10.
- (2) Added chemistry data for UNS N08034 to Table 1.
- (3) Added Mechanical property data to Table 3 for UNS N08034.

Committee B02 has identified the location of selected changes to this standard since the last issue (B619/B619M-15) that may impact the use of this standard. (Approved June 1, 2017.)

(1) Revised Scope, Table 1, Table 3, and Keywords to add new Ni-Cr-Mo alloy N06044.

ASTM International takes no position respecting the validity of any patent rights asserted in connection with any item mentioned in this standard. Users of this standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, are entirely their own responsibility.

This standard is subject to revision at any time by the responsible technical committee and must be reviewed every five years and if not revised, either reapproved or withdrawn. Your comments are invited either for revision of this standard or for additional standards and should be addressed to ASTM International Headquarters. Your comments will receive careful consideration at a meeting of the responsible technical committee, which you may attend. If you feel that your comments have not received a fair hearing you should make your views known to the ASTM Committee on Standards, at the address shown below.
